Aim: setting up Git Client

Steps to Install Git on mac

1. Open terminal in mac and type git.

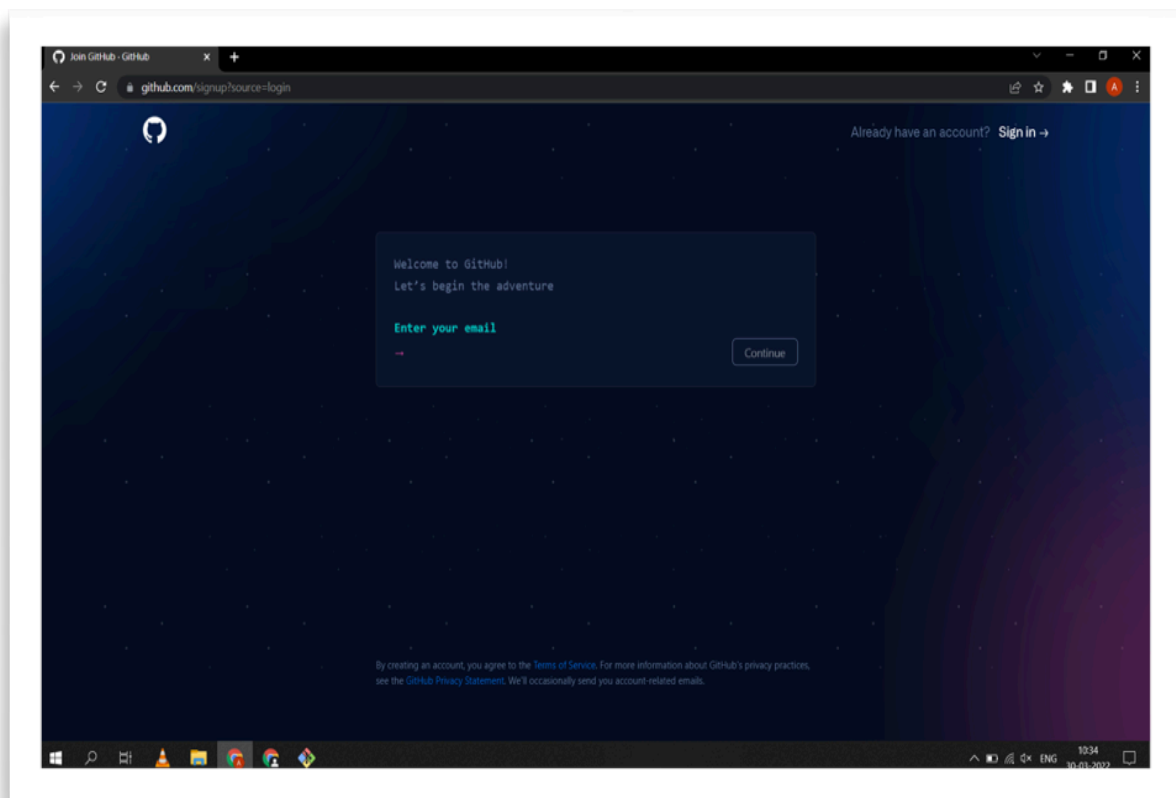

2. Add install the software.

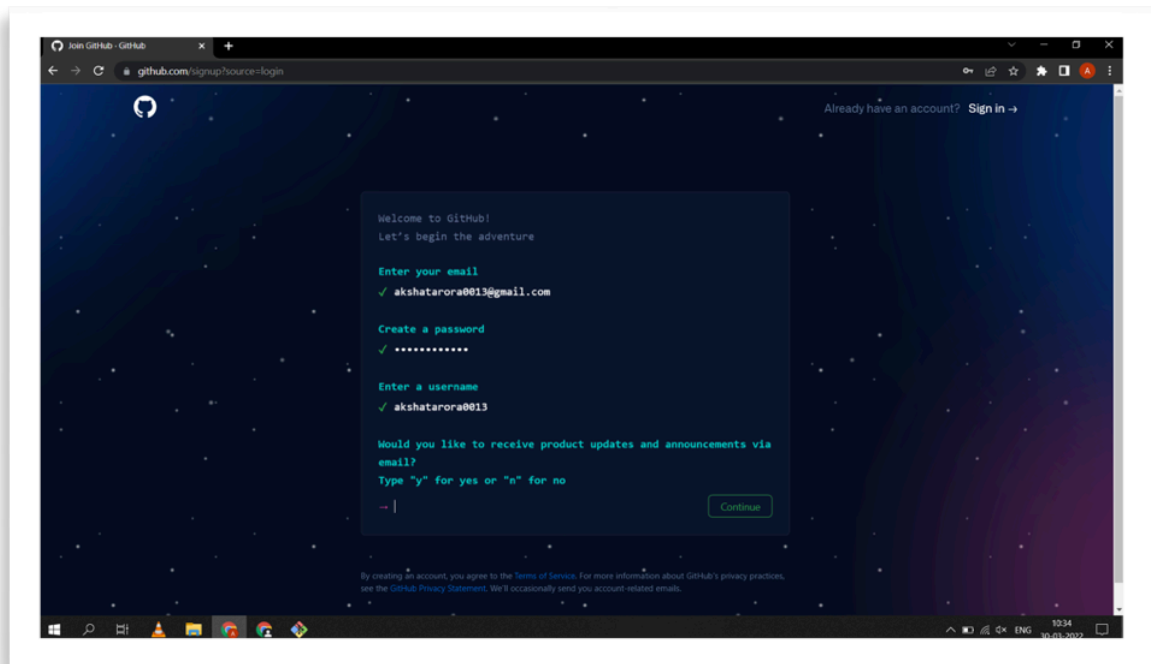

Aim: Setting up Git account

1. Go to github.com and click on signup option at the top right corner of the screen
2. Follow up the instructions popping up on screen to create your GitHub Account

How to Set Up Default Credentials for Git Config?

Set user's UserName in Git Config

The first change that we will be making inside our config file will be changing our username in Git. To change our username, follow these steps.

Open Git Bash in your system. Type the following command with your username: `git config --global user.name "Your User Name"`

Set user's Email in Git Config

After executing the above command successful, now we will change our email. By Type the following command.

```

Last login: Mon Apr 11 23:07:54 on ttys000
aahanwalia@Aahans-MacBook-Air ~ % cd "/Users/aahanwalia/Desktop/SCM"
aahanwalia@Aahans-MacBook-Air SCM % git init
hint: Using 'master' as the name for the initial branch. This default branch name
hint: is subject to change. To configure the initial branch name to use in all
hint: of your new repositories, which will suppress this warning, call:
hint:
hint:   git config --global init.defaultBranch <name>
hint:
hint: Names commonly chosen instead of 'master' are 'main', 'trunk' and
hint: 'development'. The just-created branch can be renamed via this command:
hint:
hint:   git branch -m <name>
Initialized empty Git repository in /Users/aahanwalia/Desktop/SCM/.git/
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.name "Aahanwalia"
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.email "aahan003.be21@chitkara.edu.in"
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.name
Aahanwalia
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.email
aahan003.be21@chitkara.edu.in
aahanwalia@Aahans-MacBook-Air SCM % █

```

git config --global user.email "Your EmailID"

git config --global user.name "Your Name "

AIM:Program to generate logs

git log_command is used to generate logs

AIM : Create and visualize branches

HOW TO CHANGE BRANCH IN GIT

The git branch command lets you create, list, rename, and delete branches. It

doesn't let you switch between branches or put a forked history back together

again. For this reason, git branch is tightly integrated with the git checkout and git merge commands.

Why do we need a Branch in Git and Why Branches Are Important?

Git branches come to the rescue at many different places during the development of a project. As mentioned above, branches create another line of development that is entirely different or isolated from the main stable master branch. There are many advantages to doing so.

Consider that you are developing a project with your team, and you finish a feature. You contact the client to request them to see the feature, but they are too busy, so you send them the link to have a look at the project. Okay, it's lengthy to explain in words. Let's see the same project development in different phases through images.

How to view a Local Branch in Git?

Open Git Bash and navigate to the local working repository. Type the following command to view all of your branches.

```

Last login: Mon Apr 11 23:07:54 on ttys000
aahanwalla@Aahans-MacBook-Air ~ % cd "/Users/aahanwalla/Desktop/SCM"
aahanwalla@Aahans-MacBook-Air SCM % git init
hint: Using 'master' as the name for the initial branch. This default branch name
hint: is subject to change. To configure the initial branch name to use in all
hint: of your new repositories, which will suppress this warning, call:
hint:
hint:   git config --global init.defaultBranch <name>
hint:
hint: Names commonly chosen instead of 'master' are 'main', 'trunk' and
hint: 'development'. The just-created branch can be renamed via this command:
hint:
hint:   git branch -m <name>
Initialized empty Git repository in /Users/aahanwalla/Desktop/SCM/.git/
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.name "AahanWallia"
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.email "aahan0003.be21@chitkara.edu.in"
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.name
AahanWallia
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.email
aahan0003.be21@chitkara.edu.in
aahanwalla@Aahans-MacBook-Air SCM % git status
On branch master

How to Create a Local Branch in Git?

Let's create a new branch now in our local working repository. Type the following command to create a new branch named "activity1"

`git branch <branch_name>`

```

Last login: Mon Apr 11 23:07:54 on ttys000
aahanwalla@Aahans-MacBook-Air ~ % cd "/Users/aahanwalla/Desktop/SCM"
aahanwalla@Aahans-MacBook-Air SCM % git init
hint: Using 'master' as the name for the initial branch. This default branch name
hint: is subject to change. To configure the initial branch name to use in all
hint: of your new repositories, which will suppress this warning, call:
hint:
hint:   git config --global init.defaultBranch <name>
hint:
hint: Names commonly chosen instead of 'master' are 'main', 'trunk' and
hint: 'development'. The just-created branch can be renamed via this command:
hint:
hint:   git branch -m <name>
Initialized empty Git repository in /Users/aahanwalla/Desktop/SCM/.git/
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.name "AahanWallia"
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.email "aahan0003.be21@chitkara.edu.in"
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.name
AahanWallia
aahanwalla@Aahans-MacBook-Air SCM % git config --global user.email
aahan0003.be21@chitkara.edu.in
aahanwalla@Aahans-MacBook-Air SCM % git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    1.rtf
    2.rtf

nothing added to commit but untracked files present (use "git add" to track)
aahanwalla@Aahans-MacBook-Air SCM % git add --a
aahanwalla@Aahans-MacBook-Air SCM % git commit -m "Created files"
[master (root-commit) f16b440] Created files
 2 files changed, 12 insertions(+)
 create mode 100644 1.rtf
 create mode 100644 2.rtf
aahanwalla@Aahans-MacBook-Air SCM % git branch

 create mode 100644 4.rtf
aahanwalia@Aahans-MacBook-Air SCM % git checkout master
```

How to merge branch in Git to another branch?

1 -First switch to new branch, and make a new file by using following command.

```

Hint: 'development'. The just-created branch can be renamed via this command:
Hint:
hint: git branch -m <name>
Initialized empty Git repository in /Users/aahanwalia/Desktop/SCM/.git/
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.name "AahanWalia"
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.email "aahan003.be21@chitkara.edu.in"
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.name AahanWalia
aahanwalia@Aahans-MacBook-Air SCM % git config --global user.email aahan003.be21@chitkara.edu.in
aahanwalia@Aahans-MacBook-Air SCM % git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    1.rtf
    2.rtf

nothing added to commit but untracked files present (use "git add" to track)
aahanwalia@Aahans-MacBook-Air SCM % git add --a
aahanwalia@Aahans-MacBook-Air SCM % git commit -m "Created files"
[master (root-commit) f16b448] Created files
 2 files changed, 12 insertions(+)
 create mode 100644 1.rtf
 create mode 100644 2.rtf
aahanwalia@Aahans-MacBook-Air SCM % git branch
* master
aahanwalia@Aahans-MacBook-Air SCM % git branch activity1
aahanwalia@Aahans-MacBook-Air SCM % git branch
* master
aahanwalia@Aahans-MacBook-Air SCM % git checkout activity1
Switched to branch 'activity1'
aahanwalia@Aahans-MacBook-Air SCM % git branch
* activity1
  master
aahanwalia@Aahans-MacBook-Air SCM % git status
On branch activity1
Untracked files:
  (use "git add <file>..." to include in what will be committed)

git merge <branch name>

AIM : Git life cycle description

General workflow is as follows –

- You clone the Git repository as a working copy.
- You modify the working copy by adding/editing files.
- If necessary, you also update the working copy by taking other developer's changes.
- You review the changes before commit.
- You commit changes. If everything is fine, then you push the changes to the repository.
- After committing, if you realize something is wrong, then you correct the last commit and push the changes to the repository.
